

## **File List & Guide to replicate analysis in Beaman and Magruder 2012**

File list:

- Kolkata.dta
- Master.do
- RegressionsTable1.do
- RegressionsTable2.do
- RegressionsTable3.do
- RegressionsTable4.do
- RegressionsTable5.do
- RegressionsTable6.do
- RegressionsAppendixTables1and2.do
- RegressionsAppendixTable3.do
- RegressionsAppendixTable4.do
- AppendixFigures2\_3\_4.do

The tables from Beaman and Magruder can be recreated using the Stata dataset listed above (Kolkata.dta). All analyses can be created by using one file (Master.do). Additionally, the Stata code used to generate each individual table can be found in the respective .do files (e.g. Table 1 was created using the file RegressionsTable1.do). The .do files contain code that will generate MS Excel tables similar to those in the manuscript. For any data not displayed in the Excel tables, please consult the Stata output.

The dataset Kolkata.dta is by and large the raw data. The only processing which has been done on the original data files is merging separate datasets from the original participant with the corresponding data from the referral, and from separate modules (i.e. the Post module with the Task Performance module).
